

are placed on each side of the breast. Bears have four. Sheep have but two, placed between the hinder legs. Other animals, such as the bitch and sow, have them all along the belly. Birds and other oviparous animals have no teats; but viviparous fishes, as the whale and the dolphin, have both teats and milk. The form also of the teats varies in different animals, and in the same animal at different ages. Those women whose breasts are shaped like a pear, are said to make the best nurses. In the belly of the human race the naval makes a conspicuous figure, but which is scarcely perceptible in other animals.

The arms of men but very little resemble the fore legs of quadrupeds, and much less the wings of birds. The ape is the only animal that is possessed of hands and arms; and they are fashioned more rudely, and with less exact proportion, than in men. The shoulders are also much larger in man than in any other animal, and of a form widely distinct.

The form of the back differs not much from that of many quadrupeds, only that the reins are more muscular and strong. The buttock, however, in man is different from that of all animals whatsoever. What goes by that name  
in
