

qualities, and in every respect resemble those of the country. Spanish or Barbary horses, if the breed is not crossed frequently, become in France, French horses, in the second generation, and always in the third. We are, therefore, obliged to cross the breed instead of preserving it, and renew the race at each generation, by giving the horses of Barbary or Spain, to the mares of the country ; and what is more singular, this renewal of the race, which is only done in part, produces much better effects than if the renewal was entire. A Spanish horse and mare in a foreign country do not produce such handsome horses as those which are bred from a Spanish horse and a mare of the country ; this is easy to be conceived, if attention is given to the amendment of natural defects, which will be produced when a male and female of different countries are put together. Each climate, by its influence, and by that of its food, gives a certain conformation of parts, which offends either by excess or defects. In a warm climate, there will be in excess what will be deficient in a cold climate, therefore, when we join together animals of those opposite climates, we must expect the produce to be complete : and as the most perfect work in Nature is that which has
