

*Figure 3 and 4.*

Two jaws from the plaster of Paris quarry of Montmartre, containing a portion of the Skeleton of a Bat, the first discovered in these quarries. Fig. 3, represents the back, in which are seen the relics of the omoplates, head, humerus and radius cut longitudinally, with a small part of the clavicles. Fig. 4, the under part, in which are the lower jaw teeth, portions of the vertebræ, clavicles, humerus and radius, cut longitudinally.

*Figure 5 and 6.*

One side of the lower jaw of the narrow-toothed Mastodon, found in the estate of M. le Comte de Breuner. It is here drawn rather more than a thirteenth of its real size.

*Figure 7.*

Skeleton of the Ibis.

*Figure 8.*

The Numenius Ibis. Letters *a b c* refer to the variations of the feathers alluded to in the work.

*Figure 9.*

An outline of the Ibis, drawn from an Egyptian monument.

*Figure 10.*

A beak of a mummy Ibis, discovered by M. Olivier.
