the Tyrolese Alps, a variety of chalk, 205; occurs with lias and oolite in Savoy, ib.; in a liquid state, ejected from the volcano of Macaluba in Sicily, 209; the foundation rock round Paris, 218.
Charnwood Forrest, granite of, more ancient than that of the Alps, 152, 336; sandstone of, rests unconformably on beds of slate and granite, 336 .
Chateau Landon, freshwater limestone or marble of, 232.
Chert, in mountain limestone, 94.
Cheshire, rock-salt of, 171.
Chili, earthquake there in 1822, 68; coast permanently raised by, ib.
Chimborasso, in the chain of the Andes, above one mile higher than Mont Blanc, 62.
Chlorite (from chloros, green), nearly allied to talc, 35 ; constituent parts of, $i b$.
Classification, general, of rocks, 6 ; new classification into igneous and aqueous, 55; classification of primary rocks, 56; of transition rocks, 83; coal formation intermediate between transition and secondary, 101; secondary strata, classification of, 159 ; of the secondary strata of Germany, by R. J. Murchison, 189; classification of tertiary strata round Paris, 219; of the upper tertiary strata in various parts, Chap. XVII. 237; classification of the animal kingdom by Cuvier, 21 ; of the vegetable lingdom, 26 .
Clay slate. See Slate.

- stone, 130; of Braid Hill resembles the trachyte of Auvergne, 278.
Cleavage of slate mistaken for stratification or strata seams, 45.
Clermont. See Auvergnc.
Cleveland, basaltic dyke, 135; hills of, arrangement of strata in, 188.
Clinlistone, or phonolite, 130, 133.
Cloud's Hill dolomite limestone, singular stratification of, 90.
Clunch, or indurnted clay, 103.
Coal, Chap. VIII. 101; mineral varieties of, 109 ; coal basons or coal fields, foundation rocks on which they rest, 101, 102 ; series of strata comprising a coal field, 103; coal fields deranged by faults, 105, 106; coal strata, position ol, illustrated, 107 ; iron stone accompanying coal, frequent alternations of, 115; sinking for coal, 108; searching for coal in new situations, 122; coal field of Derbyshire, depth and structure of, 102; coal field of Staffordshire, remarkable bed in, 107; of Asliby Wolds, section of, 116; coal field of South Wales, the largest in Great Britain, 104, 126; coal, durarion of in Northumberland and Dur-
ham, 124, 370; coal, conversion of vegetable matter into, 118 ; coal, formation of in freshwater lakes and marshes, 101, 113; lower coal formations intermixed with marine beds, 103; coal called wood conl or lignite, 112, 120; at Cologne, 112; wood coal elucidates the formation of mineral coal, 112.
Coal field of the valley of the Mississippi, the largest in the world, 368 ; its position illustrates the formation of coal fields, ib.; 369 .
Wields, principal of England and Wales, 373.
formations in France, 123.
- strata in the Yorkshire oolite, 185. Coast of Malabar, elevation of, 321 .
Comybeare, the Rev. W. D., on fossil saurian animals, 180, 181.
Col de Balme, 53.
Cols, or depressions in mountain ranges, their formation explained, 354 ; passages over the Alps made by excavations in beds of soft slate, 52 .
Cólumnar, or prismatic structure, 40.
Compact, without any distinguishable parts, 38.
Compact felspar, or eurite, 65.
Conchology, fossil, not sufficient for the identification of strata in distant countries, 29.
Conformablc position, 43,
transition rocks, obseryations on, 99.
Conglomerates, large fragments of stone, whether rounded or angular, and imbedded in clay or sandstone, 38,86 , 167.

Contcmporancous, the term explained, 151; formations, 154.
Coral islands formed by polypi, 75; Captain Beechy's account ol, 76 ; coral reef 700 miles in length, west of Australasia, 330.

- rag, 186, 188.

Cordicr, M., his mechanical analyses of lava, 280; his theory of central heat, 362.
Coves or caves of Yorkshire, 30 .
Crag of Norfoll, Mr. Woodward's account of its extent, 249 .
Craters of eruptions, and craters of elevation, Von Buch's theory uf, 262.
Craven, limestone of, 93.
Crich Cliff, arched stratification of, 95; metallic veins in it, ib.
Crocodiles, fossil remains of, very common, 24; head of, found by E. Spencer in the Isle of Sheppey, 222.
Cropping out, in miners' language, 108, Cross courses in veins, 290 .
Crust of the globe, comparative thickness of, 4, 129 .
Crystalline or primary limestone (Chap.
