APPENDIX.

tions of modiolæ, and other indications of a water-level four feet above the present sea, are observable on the sixth pier of the bridge of Caligula; and again on the twelfth pier, at the height of ten feet. A line of perforations by modiolæ is visible in a cliff opposite the island of Nisida, thirty-two feet above the present level of the Mediterranean.—Abstract of the Proceedings of the Geological Society; March, 1834.
