

LIGN. 137. THE LOWER JAW OF AN IGUANA.

(Presented by the late Baron Cuvier.)

Fig. 1.—The right branch of the lower jaw of an IGUANA, from Barbadoes, viewed on its inner aspect: *nat.*

- a.* Dentary bone.
- b.* Opercular bone.
- c.* Complementary bone.
- d.* Surangular bone.
- e.* Angular bone.
- f.* Articular bone.

2.—The external aspect of the same.

3.—Inner aspect of three teeth (*magnified*) attached to the alveolar parapet; with the germ of a successional tooth at the base of the middle tooth; and the sockets of other germs at the bases of the two fully formed teeth.

4. External view of the crowns of three teeth; slightly magnified.
