

of a Chelonian reptile that has come under my observation, is the bony mandible, or beak of a Turtle, *Lign.* 145. Its surface displays a fibrous cancellated structure, denoting the attachment of the horny sheath with which, in a recent state, it was covered.

LIGN. 146. RIB OF A TURTLE: *nat.* *Tilgate Forest.*

CHELONIA BELLII\* (G. A. M.).

*a.*—The striated pointed extremity of the rib.

*b.*—The distal portion of the costal plate.

CHELONIA BELLII. *Lign.* 146.—In the strata of Tilgate Forest, fragments of the carapace, and of

---

\* I have named this extinct *Chelonia* in honour of my friend, PROFESSOR THOMAS BELL, the eminent zoologist.
