

sidered in chronological order — Earthquake in Syria, 1837 — Earthquakes in Chili in 1837 and 1835 — Isle of Santa Maria raised ten feet — Chili, 1822 — Extent of country elevated — Aleppo and Ionian Isles — Earthquake of Cutch in 1819 — Subsidence in the Delta of the Indus — Island of Sumbawa in 1815 — Town of Tomboro submerged — Earthquake of Caraccas in 1812 — Shocks at New Madrid in 1811 in the valley of the Mississippi — State of the convulsed region in 1846 — Aleutian Islands in 1806 — Reflections on the earthquakes of the nineteenth century — Earthquake in Quito, Quebec, &c. — Java, 1786 — Sinking down of large tracts - - - - - Page 433

## CHAPTER XXIX.

## EARTHQUAKE IN CALABRIA, 1783.

Earthquake in Calabria, February 5. 1783 — Shocks continued to the end of the year 1786 — Authorities — Area convulsed — Geological structure of the district — Difficulty of ascertaining changes of level — Subsidence of the quay at Messina — Movement in the stones of two obelisks — Shift or fault in the Round Tower of Terranuova — Opening and closing of fissures — Large edifices engulfed — Dimensions of new caverns and fissures — Gradual closing in of rents — Bounding of detached masses into the air — Landslips — Buildings transported entire to great distances — New lakes — Funnel-shaped hollows in alluvial plains — Currents of mud — Fall of cliffs, and shore near Scilla inundated — State of Stromboli and Etna during the shocks — How earthquakes contribute to the formation of valleys — Concluding remarks - - - - - 452

## CHAPTER XXX.

EARTHQUAKES — *continued.*

Earthquake of Java, 1772 — Truncation of a lofty cone — St. Domingo, 1770 — Lisbon, 1755 — Great area over which the shocks extended — Retreat of the sea — Proposed explanations — Conception Bay, 1750 — Permanent elevation — Peru, 1746 — Java, 1699 — Rivers obstructed by landslips — Subsidence in Sicily, 1693 — Moluccas, 1693 — Jamaica, 1692 — Large tracts engulfed — Portion of Port Royal sunk — Amount of change in the last 150 years — Elevation and subsidence of land in Bay of Baixæ — Evidence of the same afforded by the Temple of Serapis - - - - - 475

## CHAPTER XXXI.

## ELEVATION AND SUBSIDENCE OF LAND WITHOUT EARTHQUAKES.

Changes in the relative level of land and sea in regions not volcanic — Opinion of Celsius that the waters of the Baltic Sea and Northern Ocean were sinking — Objections raised to his opinion — Proofs of the stability of the sea-level in the Baltic — Playfair's hypothesis that the land was rising in Sweden — Opinion of Von Buch — Marks cut on the rocks — Survey of these in 1820 — Facility of detecting slight alterations in level of sea on coast of Sweden — Shores of the ocean also rising — Area upheaved — Shelly deposits of Uddevalla — Of Stockholm, containing fossil shells characteristic of the Baltic — Subsidence in south of Sweden — Fishing-hut buried under marine strata — Upheaval in Sweden not always in horizontal planes — M. Bravais — Sinking of land in Greenland — Bearing of these facts on geology - - - - - 498

## CHAPTER XXXII.

## CAUSES OF EARTHQUAKES AND VOLCANOS.

Intimate connexion between the causes of volcanos and earthquakes — Supposed original state of fusion of the planet — Universal fluidity not proved by spheroidal figure of the earth — Attempt to calculate the thickness of the solid crust of the earth by precessional motion — Heat in mines increasing with the depth — Objections to the supposed intense heat of a central fluid — Whether chemical changes may produce volcanic heat — Currents of electricity circulating in the earth's crust — Theory of an unoxidated metallic nucleus — The metallic oxides when heated may be deoxidated by hydrogen - - - - - 512
