See remarks on different species of opossums.	164
Measures (Coal); same as beds, . . . . .	22
Megatherium. ( <i>μεγα</i> , great; <i>θηριον</i> , beast.) For description of, see . . . . .	77
Metals. ( <i>μεταλλον</i> , a mine, mineral;) simple elementary bodies, characterised generally by their peculiar metallic lustre and great specific gravities. They have been distributed into different classes, according to their affinity for oxygen and the properties of their oxides. See an account of, . . . . .	134, etc.
Metamorphic. Transformed. ( <i>μετα</i> , trans; <i>μορφη</i> , forma.) This is a name suggested by Sir C. Lyell, for rocks which he was the first to regard as stratified rocks, altered by igneous agency, . . . . .	23
Meteorology. ( <i>μετεωρος</i> , lofty, and <i>λογος</i> , discourse;) the science which treats of the atmosphere and its phenomena, . . . . .	157
Miller, Mr. Hugh. On old red sandstone, and on the ichthyolites of Orkney, . . . . .	22
Milton. Quoted, . . . . .	3, 61
Mollusca. ( <i>Molluscum</i> , from <i>mollis</i> , soft.) In zoology, a division or class of animals whose bodies are soft, without an internal skeleton or articulated covering. Some of them breathe by lungs, others by gills; some live on land, others on water; some of them are naked, others testaceous, or provided with shells. Many of them are fur-
