

mens from Colonel E. Jewett, of Utica; from Mr. Albert G. Carll, of Jericho, Long Island; and from an anonymous contributor in the vicinity of Rome. Mr. A. Mayor has sent me those of New Jersey, with interesting remarks upon the height at which they are found in the Cooley Mountains. From Pennsylvania, I have received very extensive collections and highly valuable information. Among the votaries of Herpetology, I must mention, first, Major LeConte, to whom science is indebted for the first accurate account of the North American Testudinata in general. Next to him I am most indebted to Prof. S. S. Haldeman, and to Dr. E. Hallowell, for series of all the species of the State. Dr. John LeConte, Dr. Wm. Darlington, and Dr. E. Michener have also sent me valuable specimens and notices; and to Dr. J. Leidy I owe the communication of the fossil remains of this order of Reptiles preserved in the splendid museum of the Academy of Natural Sciences. To Prof. Baird I am also greatly indebted for specimens from Pennsylvania and Western New York; but especially for a large collection of fossil bones of Turtles from the caves near Carlisle.

From Ohio, I have received specimens and notices from Dr. J. P. Kirtland, of East Rockport; from Prof. E. B. Andrews, of Marietta; from Messrs. Jos. Clark and David H. Shaffer, of Cincinnati; and from Mr. George Clark, of Toledo. From Indiana, from Prof. Richard Owen, of New Harmony; and Mr. F. C. Hill, of Delphi. From Illinois, from Dr. Watson, of Quincy; and from Messrs. R. P. Stevens, T. H. McChesney, and Robert Kennicott. Mr. Kennicott has furnished me with interesting data respecting the geographical distribution of the soft-shell Turtles in the tributaries of the Mississippi. From Michigan and Wisconsin, I have received very fine series of specimens, which have enabled me to ascertain the specific differences that distinguish the western *Chrysemys* from that of the Eastern States, and also numerous specimens of *Emys Meleagris*. I am particularly indebted for these to Dr. P. R. Hoy, of Racine; to Mr. J. A. Lapham, of Milwaukee; to Dr. Manly Miles, of Flint; and to Prof. A. Winchell, Dr. A. Sager, and Mr. D. M. Johnson, of Ann-Arbor. Dr. John H. Rauch, of Burlington, Iowa, has sent me large numbers of specimens from that State. From Missouri and Arkansas, I have received a great many specimens through the kindness of Dr. George Engelmann, of St. Louis; and of Mr. George Stolley, now in Texas, who collected very extensively for me in the western and south-western parts of Missouri, and later, in Arkansas and Texas. From the Territory of Minnesota, Mr. James M. Barnard, of Boston, has secured for me a dozen fine specimens of an extremely rare species of *Chrysemys*, heretofore known from a single specimen preserved in the museum of the Academy of Philadelphia, and supposed to have been found in Oregon. My acquaintance with the Testudinata of the other western territories, and with those of Delaware, Maryland, and Virginia, is chiefly derived from the contributions of the Smithsonian Institution, among which were the valuable collections of Dr. R. O. Abbott, and of Dr. C. B. Kennerley. From Kentucky and Tennessee, I have received specimens from Messrs. N. A. Gwyn, H. C. Tay-
