

CONTENTS OF VOL. III.

INTRODUCTION.

	Page
Historical Review of the attempts made with the object of considering the Phenomena of the Universe as a <i>Unity of Nature</i>	5-25

SPECIAL RESULTS OF OBSERVATIONS IN THE DOMAIN OF COSMICAL PHENOMENA

A. URANOLOGICAL PORTION of the physical description of the world.— <i>a.</i> ASTROGNOSE	26-28
I. The realms of space, and conjectures regarding that which appears to occupy the space intervening between the heavenly bodies	29-41
II. Natural and telescopic vision, 41-73; Scintillation of the stars, 73-83; Velocity of light, 83-89; Results of photometry, 89-102	41-102
III. Number, distribution, and color of the fixed stars, 103-139; Stellar masses (stellar swarms), 139-143; The Milky Way interspersed with a few nebulous spots, 143-151	103-151
IV. New stars, and stars that have vanished, 151-160; Variable stars, whose recurring periods have been determined, 160-177; Variations in the intensity of the light of stars whose periodicity is as yet uninvestigated, 177-182	151-182
V. Proper motion of the fixed stars, 182-185; Problematical existence of dark cosmical bodies, 185-188; Parallax—measured distances of some of the fixed stars, 188-194; Doubts as to the assumption of a central body for the whole sidereal heavens, 194-199	182-199
VI. Multiple, or double stars—Their number and reciprocal distances.—Period of revolution of two stars round a common center of gravity	199-217
