

CHAPTER XXX.—*On the Different Ages of the Volcanic Rocks.*

Tests of relative age of volcanic rocks—Test by superposition and intrusion—Test by alteration of rocks in contact—Test by organic remains—Test of age by mineral character—Test by included fragments—Volcanic rocks of the Post-Pliocene period—Basalt of Bay of Trezza in Sicily—Post-Pliocene volcanic rocks near Naples—Dikes of Somma—Igneous formations of the Newer Pliocene period—Val di Noto in Sicily - - - - Page 519

CHAPTER XXXI.—*On the Different Ages of the Volcanic Rocks—continued.*

Volcanic rocks of the Older Pliocene period—Tuscany—Rome—Volcanic region of Olot in Catalonia—Cones and lava-currents—Miocene period—Brown-coal of the Eifel and contemporaneous trachytic rocks—Age of the brown-coal—Peculiar characters of the volcanoes of the Upper and Lower Eifel—Lake craters—Trass—Hungarian volcanoes - - - - 530

CHAPTER XXXII.—*On the Different Ages of the Volcanic Rocks—continued.*

Volcanic rocks of the Pliocene and Miocene periods continued—Auvergne—Mont Dor—Breccias and alluviums of Mont Perrier, with bones of quadrupeds—Mont Dome—Cones not denuded by general flood—Velay—Bones of quadrupeds buried in scorias—Cantal—Eocene volcanic rocks—Tuffs near Clermont—Hill of Gergovia—Trap of Cretaceous period—Oolitic period—New Red Sandstone period—Carboniferous period—Old Red Sandstone period—Silurian period—Cambrian volcanic rocks - - - - 545

CHAPTER XXXIII.—*Plutonic Rocks—Granite.*

General aspect of granite—Analogy and difference of volcanic and plutonic formations—Minerals in granite—Mutual penetration of crystals of quartz and felspar—Syenitic, talcose, and schorly granites—Eurite—Passage of granite into trap—Granite veins in Glen Tilt, and other countries—Composition of granite veins—Metalliferous veins in strata near their junction with granite—Quartz veins—Whether plutonic rocks are ever overlying—Their exposure at the surface due to denudation - - - - 560

CHAPTER XXXIV.—*On the different Ages of the Plutonic Rocks.*

Difficulty in ascertaining the age of a plutonic rock—Test of age by relative position—Test by intrusion and alteration—Test by mineral composition—Test by included fragments—Recent and Pliocene plutonic rocks, why invisible—Tertiary plutonic rocks in the Andes—Granite altering Cretaceous rocks—Granite altering Lias—Granite altering Carboniferous strata—Granite of the Old Red Sandstone period—Syenite altering Silurian strata in Norway—Oldest plutonic rocks—Granite protruded in a solid form—Age of the granites of Arran, in Scotland - - - - 573

CHAPTER XXXV.—*Metamorphic Rocks.*

General character of metamorphic rocks—Gneiss—Hornblende-schist—Mica-schist—Clay-slate—Quartzite—Chlorite-schist—Metamorphic limestone—Alphabetical list and explanation of the more abundant rocks of this family—Origin of the metamorphic strata—Their stratification—Fossiliferous strata near intrusive masses of granite converted into different members of the metamorphic series—Objections to the metamorphic theory considered—Partial conversion of Eocene slate into gneiss - - - - 587

CHAPTER XXXVI.—*Metamorphic Rocks—continued.*

Origin of the metamorphic rocks, *continued*—Definition of joints, slaty cleavage, and foliation—Causes of these structures—Mechanical theory of cleavage—Supposed combination of crystalline and mechanical forces—Lamination of some volcanic rocks due to motion—Whether the foliation of the crystalline schists be usually parallel with the original planes of stratification 600
