

# CONTENTS.

[Within the last year or two, several works have been published in this country on subjects more or less closely approaching to that here treated. It may, therefore, be not superfluous to say that the author of the following pages believes that he has not borrowed any of his views or illustrations from recent English writers on Natural Theology.]

	Page.
<b>INTRODUCTION.</b>	
CHAPTER I. Object of the Present Treatise . . . .	13
II. On Laws of Nature . . . . .	17
III. Mutual Adaptation of Laws of Nature . . . .	20
IV. Division of the Subject . . . . .	23
 <b>BOOK I. TERRESTRIAL ADAPTATIONS . . . . .</b>	
CHAPTER I. The Length of the Year . . . . .	28
II. The Length of the Day . . . . .	37
III. The Mass of the Earth . . . . .	43
IV. The Magnitude of the Ocean . . . . .	50
V. The Magnitude of the Atmosphere . . . . .	51
VI. The Constancy and Variety of Climates . . . .	52
VII. The Variety of Organization corresponding to the Variety of Climate . . . . .	57
VIII. The Constituents of Climate . . . . .	66
The Laws of Heat with respect to the Earth . . . . .	67
IX. The Laws of Heat with respect to Water . . . .	70
X. The Laws of Heat with respect to Air . . . . .	81
XI. The Laws of Electricity . . . . .	91
XII. The Laws of Magnetism . . . . .	93
XIII. The Properties of Light with regard to Vegetation . . . . .	94
XIV. Sound . . . . .	96
XV. The Atmosphere . . . . .	102
XVI. Light . . . . .	104
XVII. The Ether . . . . .	111
XVIII. Recapitulation . . . . .	113
