which, he says, I have affixed the name of cervi-capra, because it inclines both to the goat and the stag; for it is nearly of the size and shape of the stag, but its horns, like those of the goat, are very simple, and very much bent backwards. Garcias ab Horto says, that in Corasson, and in Persia, there is a kind of he-goats, called pasans, and that it is in their stomachs the oriental bezoar is formed; that as well as in Persia it is found in Malacca, and near Cape Comorin, and that in great numbers of the goats killed for the subsistence of the troops these stones are regularly sought for and found in their stomachs. Christopher Acosta confirms what Garcias and Monard have said, without adding any thing new; in short, not to omit any thing which has a relation to the historical detail of this stone, Koempfer, a man of more learning than exactness, being in the province of Laar, in Persia, says, that he went with the natives of that country to hunt the pasan, which produces the bezoar, and that he saw them extract that stone; besides which, he affirms, that the true oriental bezoar proceeds from this animal; that the buck ahu, of which he has also given a figure, produces the bezoar, but that they are of a very inferior quality.
