from the mere will of the creature, which has great powers of contractility. This being assumed, we are entitled to say to Oken, who makes one genus of the Dianthus, and another genus of the plumosa, —" Generis falsa est ea fabula vestri."

Mr Templeton under the name of "A. DIANTHUS ?" describes a species which appears to be distinct.—"Conic, rounded above, of a green or greenish-yellow colour, with a few scattered warts in longitudinal rows; disk light blue, often divided into 11 lobes; tentacula numerous, pale, in from 5 to 7 fasciculi, variegated with dark annuli. In the hollows of the rocks at Ballyholm Bay, Bangor." Mag. Nat. Hist. ix. 304.

6. A. MACULATA, base fixed to a thin horny expansion attached to the apertures of various dead shells; body longitudinally sulcated, marked with purple spots; tentacula numerous, rather short, arranged in three or four irregular rows. Mr Adams.

Actinia maculata, Adams in Lin. Trans. v. p. 8. Turt. Gmel. iv. 105. Penn. Brit. Zool. iv. 104. Coldstream in Edin. New Phil. Journ. ix. p. 236. t. 4. f. 6. 7. and in Edin. Journ. Nat. and Geog. Sc. iii. 49.—A. carciniopados, Otto in Nov. Act. Acad. C. L. C. Nat. Cur. xi. 288. pl. 40.—Parasite Actinea, Landsborough in Scottish Christian Herald, ii. 333.—A. effecta, Turt. Brit. Faun. p. 131. Turt. Gmel. iv. 101.

Hab. Milford Haven, surrounding the apertures of deserted shells of the Murex despectus, *Adams*. Torbay; and in Rothesay and Kames Bays in Bute, either thrown ashore after easterly gales, or drawn in by flounder-nets, *Dr Coldstream*. Stevenston, Ayrshire, *Rev. D. Landsborough*.

"This beautiful species is longitudinally sulcated, having the edges of the base crenated: the lower part is an obscure red, and the upper part is transparent white marked with fine purple spots; the outer circumference of the aperture has a narrow stripe of pink.
