

- Responsibility, 276, 278.
- Revelation; its evidence, 24. Its necessity, 32. Harmonious with science, 25, 142, 164, 259. Its style and illustrations adapted to the capacities of men, 204. Its employment of imagery, 205, 207. Utility of this method, 212. Finally completed by Christianity, 226. Necessity of studying, with serious application, 271.
- Rhind, Mr. William; on the age of the earth, 188. His opinion upon vegetable structure, 305.
- Rocks; pyrogenous, 49, 331. Stratified, 50, 189: see *Stratification*.
- Romaine, Rev. W.; on the manner in which the Deity is revealed, 257.
- Rosenmüller, the elder; on the Mosaic records, 344.
- Russeger, on the Baobab, 304.
- Science; duty of cultivating, 261; by personal effort, 264. Its benefits, 274. Its tendency to religion, 335.
- Scientific men; their advantages and responsibility, 282. Their high motives to piety, 284.
- Scripture; the genuine sense to be sought, 33, 200, 213, 257. Dissonance with Geology, only in superficial appearance, 70, 142, 258, 338. Not designed to convey philosophical knowledge, 169, 345. Its certain truth, 199. Its style with regard to natural objects, 214, 221, 225, 237, 351. Its manner and style in describing the Deity, 208, 256, 257. Injurious effects of not justly interpreting its figurative language, 272, 344.
- Scrope, C. Poulett, Esq.; on the geological phenomena of Central France, 129.
- Sea; depth of, 44.
- Sea-beaches, 111, 330.
- Sedgwick, Rev. Prof.; on the opponents of Geology, 37, 333. On its general character and interest, 37, 66. On diluvium and deluges, 121, 344. On Mr. Lyell's principal work, 196. On the misunderstanding of the figurative language of Scripture, 225. On symmetrical divisions of early rocks, 331. Observations in the Alps, 325. The author's obligations to him, 338. On the evidence of the earth's antiquity, 339—343.
- Sediment, deposited by water, 64, 312, 321, 324, 326, 327.
- Silliman, Prof. Yale College; on the duty of Christian ministers to become acquainted with Geology, 274. On Coal-formations, 311.
- Silurian System of rocks, 323, 333.
- Smith, William; his services to Geology, 61, 290. His death, 304. Species of animal remains; their range, 62. Number and proportion, 60, 63, 303. Different regions, 63, 66. Vertical penetration, 63. Position, 64.
- Stillingfleet, Bishop; on the Deluge, 253.
- Stonesfield fossil, 76, 335.
- Strabo's opinions on some geological phenomena, 94.
- Stratification; 46, 51, 56, 296, 321, 322, 324, 325, 326, 328, 339. Order, 46. 61. Disposition, 51. Texture, 52. Influenced by heat, 53. Erroneous reasoning upon, 313, 315.
- Subsidence, 55, 56.
- Sumner, Dr. John Bird, Bishop of Chester; on concessions mutually of Geology and Biblical Science, 144. On the relation of the Mosaic records to Geology, 346.
- Swainson, William, Esq.; on animal regions, 67.
- Tertiary strata; their constitution and extent, 312, 325. Their organic remains, 339.
- Theology; its alliances with all knowledge, and its harmony with sound philosophy, 349.
- Time; its reference to Geology, 71, 73, 197, 318, 325, 326, 329, 333, 348.
- Truth; scientific and religious, consistent, 25, 27, 349. Its nature and various aspects, 26—35.
- Turner, Edward, M. D.; his merits in geological and other science; his character, and his death, 286, 287.
- , Sharon, Esq.; his observations on geological subjects, 184.
- Universal formations; not admitted, 65, 296.
- Universe; dependent, 31. Distinction from the INDEPENDENT CAUSE, 31.
