

CHAPTER XXXIII.

CAUSES OF EARTHQUAKES AND VOLCANOS — *continued.*

Review of the proofs of internal heat—Theory of an unoxidated metallic nucleus — Decomposition of water a source of volcanic heat — Geysers of Iceland — Causes of earthquakes — Wavelike motion—Expansive power of liquid gases — Connection between the state of the atmosphere and earthquakes—Permanent upheaval and subsidence of land—Expansion of rocks by heat—The balance of dry land how preserved—Subsidence in excess—Conclusion - Page 526

BOOK III.

CHAPTER XXXIV.

CHANGES OF THE ORGANIC WORLD NOW IN PROGRESS.

Division of the subject—Examination of the question, Whether species have a real existence in nature?—Importance of this question in geology—Sketch of Lamarck's arguments in favour of the transmutation of species, and his conjectures respecting the origin of existing animals and plants—His theory of the transformation of the orang-outang into the human species - - - 544

CHAPTER XXXV.

TRANSMUTATION OF SPECIES — *continued.*

Recapitulation of the arguments in favour of the theory of transmutation of species — Their insufficiency — Causes of difficulty in discriminating species — Some varieties possibly more distinct than certain individuals of distinct species — Variability in a species consistent with a belief that the limits of deviation are fixed — No facts of transmutation authenticated — Varieties of the Dog — the Dog and Wolf distinct species — Mummies of various animals from Egypt identical in character with living individuals — Seeds and plants from the Egyptian tombs — Modifications produced in plants by agriculture and gardening - 556

CHAPTER XXXVI.

WHETHER SPECIES HAVE A REAL EXISTENCE IN NATURE — *continued.*

Limits of the variability of species — Species susceptible of modification may be altered greatly in a short time, and in a few generations; after which they remain stationary — The animals now subject to man had originally an aptitude to domesticity — Acquired peculiarities which become hereditary have a close connexion with the habits or instincts of the species in a wild state — Some qualities in certain animals have been conferred with a view of their relation to man — Wild elephant domesticated in a few years, but its faculties incapable of farther development - - - - - 569

CHAPTER XXXVII.

WHETHER SPECIES HAVE A REAL EXISTENCE IN NATURE — *continued.*

Phenomena of hybrids — Hunter's opinions — Mules not strictly intermediate between parent species — Hybrid plants — Experiments of Kölreuter and Wiegmann — Vegetable hybrids prolific throughout several generations — Why rare in a wild state — De Candolle on hybrid plants — The phenomena of hybrids confirm the distinctness of species — Theory of the gradation in the intelligence of animals as indicated by the facial angle — Doctrine that certain organs of the foetus in mammalia assume successively the forms of fish, reptile, and bird — Recapitulation - - - - - 578

CHAPTER XXXVIII.

LAWS WHICH REGULATE THE GEOGRAPHICAL DISTRIBUTION OF SPECIES.

Analogy of climate not attended with identity of species — Botanical geography — Stations — Habitations — Distinct provinces of indigenous plants — Vegetation of islands — Marine vegetation — In what manner plants become diffused — Effects of wind, rivers, marine currents — Agency of animals — Many seeds pass through the stomachs of animals and birds undigested — Agency of man in the dispersion of plants, both voluntary and involuntary — Its analogy to that of the inferior animals - - - - - 590
