

CONTENTS.

INTRODUCTORY CHAPTER.

Page

Objects of physical science—divisions of science—influence of theory—personal advantages derived from science—proofs of design—knowledge raises the standard of happiness—pleasures of investigation—harmony of natural agents—application of science to the arts—effects of scientific knowledge—origin of the physical sciences—importance of the mathematics—education	19
---	----

CHAPTER I.

THE EARTH IN RELATION TO THE UNIVERSE.

The form and dimensions of the earth—revolution of the earth on its axis—theory of the formation of the earth—centrifugal force—the pendulum—the fixed stars—the planets—force of gravity—curvilinear motion—magnitude and distance of the planets—day and night	23
--	----

CHAPTER II.

CELESTIAL APPEARANCES.

Comets—origin of astrology—nebulæ—phases of the moon—eclipses	50
---	----

CHAPTER III.

THE ATMOSPHERE AND ITS PHENOMENA.

Proofs of the existence of an atmosphere—composition of air—properties of the atmosphere—transparency—fluidity—balloons—expansibility of air—pressure of the atmosphere—barometers—extent of the atmosphere—air a conductor of sound—echoes—wind	68
