

## CHAPTER IV.

ATMOSPHERIC PHENOMENA DEPENDANT ON THE DISTRIBUTION  
OF HEAT.

	Page
Nature of heat—dilatation by heat—thermometers—latent heat—evaporation—hygrometers—clouds—classification of clouds—rain—snow—hail—dew—hoar-frost—mist—connexion of the sciences of heat and meteorology .	102

## CHAPTER V.

PHENOMENA DEPENDANT ON THE DISTRIBUTION AND CON-  
DITIONS OF LIGHT.

Production of light—nature of light—general facts—reflection—refraction—twilight—mirage—decomposition of light by refraction—decomposition of light by absorption—colour of bodies—colour of the clouds—rainbow—halo—coronæ—parhelia—the study of the science of optics	155
---	-----

## CHAPTER VI.

PHENOMENA DEPENDANT ON THE DISTRIBUTION OF ELEC-  
TRICITY.

Identity of electricity and the agent that produces lightning—effects of lightning—circumstances under which lightning is produced—thunder-clouds—lightning-conductors—electrical condition of the atmosphere—aurora borealis—St. Elmo's light . . . . .	187
--	-----

## CHAPTER VII.

## PHENOMENA DEPENDANT ON TERRESTRIAL MAGNETISM.

The loadstone—magnetic attraction—magnetic induction—polarity and induction—variation of the magnetic needle—annual change of the variation—diurnal change of the variation—the dip—origin of terrestrial magnetism	203
---	-----

## CHAPTER VIII.

## INTERIOR OF THE EARTH.

Geological theories—the crust of the earth—general remarks—the order of rocks—stratification of rocks—cleavage of rocks—disturbed strata—elevation or depression of strata—classification of stratified rocks—unstratified
