

formative activities in the organic and animated bodies? What has been discovered does not by a long way exhaust the discoverable. The imperfectibility of empiric investigation makes the problem of explaining the changeability of matter from the forces of matter an *indefinite one*.

A. URANOLOGICAL PORTION of the *Physical Description of the Universe*—p. 26–28.

Two sections, one of which comprises the heaven of fixed stars; the other, our *solar system*—p. 26.

α. ASTROGNOSEY; Heaven of the fixed stars.

I. The realms of space, and conjectures regarding that which appears to occupy the space intervening between the heavenly bodies—p. 29–41.

II. Natural and telescopic vision—p. 49–72; Scintillation of the stars—73–83; *Velocity* of light—p. 84–88; Results of photometry—p. 89–102. Order of the fixed stars according to their luminous intensity.

III. Number, distribution, and color of the fixed stars—p. 103–139; *Stellar clusters (stellar swarms)*—p. 140–143; *The Milky Way* interspersed with a few *nebulous spots*—p. 144–151.

IV. New stars, and stars that have vanished—p. 151–160; *Variabile* stars, whose recurring *periods* have been determined—p. 160–177; Variations in the intensity of the *light* of stars whose periodicity is as yet uninvestigated—p. 177–182.

V. Proper motion of the fixed stars—p. 182–185; Problematical existence of dark cosmical bodies—p. 185–187; Parallax—measured distances of some of the fixed stars—p. 187–194; Doubts as to the assumption of a central body for the whole sidereal heavens—p. 195–199.

VI. Multiple, or double stars—Their number and reciprocal distances. Period of revolution of two stars round a common center of gravity—p. 199–213.

VII. Nebulous spots. Are these only remote and very dense clusters of stars? The two Magellanic Clouds, in which crowded nebulous spots are interspersed with numerous stellar swarms. The so-called black spots (Coal-sacks) of the Southern hemisphere—p. 13–53

β. SOLAR REGION—p. 53–134.

I. The Sun considered as the central body—p. 59–88.

II. The Planets—p. 88–134.

A. General consideration of the planetary world—p. 88–134.

a. Principal Planets—p. 89–131.

b. Secondary Planets—p. 131–134.

B. Special enumeration of the planets and their moons as parts of the solar system—p. 134.

Sun—p. 135–137.
