

## CHAPTER VIII.

	PAGE
Upper Formations of the Old Red Sandstone. — Room enough for each and to spare. — Middle, or Cornstone Formation. — The <i>Cephalaspis</i> its most characteristic Organism. — Description. — The Den of Balruddery richer in the Fossils of this middle Formation than any other Locality yet discovered. — Various Contemporaries of the <i>Cephalaspis</i> . — Vegetable Impressions. — Gigantic Crustacean. — <i>Seraphim</i> . — Ichthyodolites. — Sketch of the Geology of Forfarshire. — Its older Deposits of the Cornstone Formation. — The Quarries of Carmylie. — Their Vegetable and Animal Remains. — The Upper Formation. — Wide Extent of the Fauna and Flora of the earlier Formations. — Probable Cause, . . .	125-160

## CHAPTER IX.

Fossils of the Upper Old Red Sandstone much more imperfectly preserved than those of the Lower. — The Causes obvious. — Difference between the two Groups, which first strikes the Observer, a difference in size. — The *Holoptychius* a characteristic Ichthyolite of the Formation. — Description of its huge Scales. — Of its Occipital Bones, Fins, Teeth, and general Appearance. — Contemporaries of the *Holoptychius*. — Sponge-like Bodies. — Plates resembling those of the Sturgeon. — Teeth of various forms, but all evidently the teeth of fishes. — Limestone Band and its probable Origin. — Fossils of the Yellow Sandstone. — the *Pterichthys* of Dura Den. — Member of a Fam-
