

- Trilobites, first recognition of, 117.
- Uniformitarianism in Geology, 199, 403, 472.
- United States, volcanic geology of, 271; geologists of, on river erosion, 313; early geological maps of, 458.
- Universal formations of Werner, 212, 214, 215, 230.
- Vallisneri, Antonio, 60.
- Valleys, origin of, 57, 94, 159, 188, 312, 351.
- Vanuxem, L., 460.
- Venetz, J., 442.
- Vesuvius, 10; recognised by Strabo to be a volcano, 18; eruption of in A.D. 79, 23, 27; experiments in fusion of lavas of, 322.
- Vinci, Leonardo da, 50.
- Vivarais, geology of the, 338.
- Voigt, J. K. W., 223.
- Volcanic geology, 127, 133, 140, 162.
- Volcanic rocks, 195; intercalated among ancient geological formations, 259, 339; ascertained to be of all geological periods, 263; Tertiary, 260; Carboniferous, 264, 271; Old Red Sandstone and Devonian, 264, 266, 270, 271; Silurian, 266, 267; Cambrian, 267; Permian, 271.
- Volcanoes, in Mediterranean basin, 10; Aristotle's explanation of, 15; Lucretius on, 17; as safety-valves, antiquity of the doctrine of, 19; Seneca on, 24; appealed to in the Middle Ages as agents in the accumulation of the fossiliferous formations, 47, 53, 62, 64; supposed to be due to combustion of inflammable substances, 25, 56, 57, 60, 73, 75, 80, 82, 93, 133, 156, 225; attributed to spontaneous decomposition of iron-pyrites, 76, 94, 274; supposed modern origin of, 82, 93, 224, 225, 258; first discovery of extinct, in France, 127-135, 339; connected with internal heat of the globe, 255; supposed connection of with electricity, 258.
- Vulcanists, 133, 136, 218, 224, 246, 247, 252, 257, 262, 327, 332.
- Walch, J. E. I., his *Das Steinreich*, 101; continued G. W. Knorr's work on Fossils, 102.
- Wales, volcanic geology of, 267, 268, 270.
- Wallerius, 189.
- Weather, influence of on earthquakes and volcanoes, 14, 19, 27.
- Webster, T., 396.
- Werner, A. G., forestalled by Guettard in his explanation of origin of Basalt, 136, 156, 226; opposed volcanic theories, 175, 222, 225; on aqueous origin of granite, 185, 290, 307; wide influence of, 201; popularity of, 202; childhood and education of, 203; training of, in mining, 204; at Leipzig University, 205; first published essay of, 225; appointed to Freiberg Academy, 206; personal appearance and charm of, 207; style of lecturing of, 208, 233, 235; character of his teaching, 209, 238; methodical characteristics of, 209, 230, 231; mineralogical nomenclature
